

Design and Technology

At Clifford Holroyde all the pupils are given the opportunity to develop their designing and making skills through completing a number of projects. These projects are intended to encourage pupils to become more independent and creative in their thinking. They also extend the pupils knowledge and understanding of materials, systems and control, structures, products, manufacturing and health and safety.

Pupils in Key Stage 3 complete up to three design and make projects a year which follow the National Curriculum Programme of Study for Design and Technology.

Pupils in Key Stage 4 are given the opportunity to follow the Design and Technology, Resistant Materials GCSE course. As part of the course pupils will produce a project which includes a design folder and a practical piece of work. They will also sit a written exam at the end of Year 11.

Alternatively pupils can choose to complete a number of AQA Award Units which are more practical based.
